### Key Features & Benefits of the Automatic Transmission:

- Multi-Vehicle application means the same fluid can be used across multiple vehicles. Both Full synthetic (ATF FS) and Semi synthetic (ATF MHP) covers over 99% of the Australian vehicle market. Penrite also makes a Multi-vehicle mineral product (ATF DX III).
- Penrite is also committed to develop products for the right application. We also offer 3 Automatic Transmission Fluids that are application specific ie: are not Multi-Vehicle products. These include a CVT Fluid (CVT FLUID V), a non-friction modified product for pre 1980 Fords Type F and G Fluid and competition use (ATF 33) and a GM fully approved and licensed DEXRON®-VI product for warranty purposes (ATF DX-VI).
- A complete range of fluids covering most vehicles
- Licensed and approved products (ATFDX6)
- Extended Long drain periods
- Smoother shift (ATFFS and ATFMHP)
- Specialist fluids (ATF33 and CVTV)
- Passenger Car, 4WD and Heavy Vehicle applications

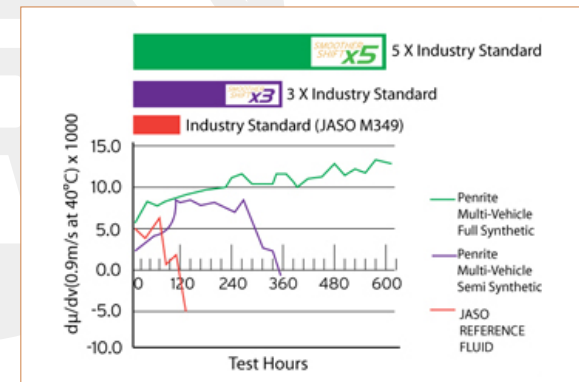

## AUTOMATIC TRANSMISSION

Penrite manufacture a range of automatic transmission fluids (ATFs) that can be used in passenger, light and heavy duty vehicles. They may also be used as compressor fluids or as power steering fluids where ATFs are specified.

### Smoother Shift Chart

Smoother shift durability is a measure of performance in automatic transmissions. Penrite's ATF FS is a Full Synthetic fluid which provides smoother shift durability 5 times longer than the industry standard. Our ATF MHP is a Semi Synthetic fluid offering smoother shift performance that is 3 times longer than the industry standard. The industry standard test method is the JASO M349 - Anti-Shudder test. This means you will experience a smoother shift with ultimate high torque power in your transmissions for longer.
